

THE ANSWER TO PARTQ... THE TIMBER WINDOW & DOOR INDUSTRY HAS BEEN LOOKING FOR!

SINGLE DOORS

THE
PARTQ
BLUEPRINT

IN COLLABORATION WITH

ERA

accoya 

 **MIDLAND**
JOINERY SERVICES LTD.

INTRO

The elephant in the room for Joineries is PartQ, and it's time that something was done about it, for the sake of the industry.

For years PartQ has been a headache for Joiners making windows and doors for new builds and extensions, as there's been a lot of misinformation and misunderstanding out there. With the impending implications of PartQ being brought in for the refurbishment market, it's something we believe Joiners desperately need help with. Not a scheme or membership that is there to make a profit.

SD Hardware has played a crucial role in bringing together Accoya wood, ERA, and Midland Joinery Services to ensure compliance with Part Q of the Building Regulations. This is something we're giving away to joinery industry for **FREE**.

This document provides all the necessary details to ensure compliance with Part Q. Including details from our PAS24 tests, which will serve as the blueprint for achieving compliance.

FREQUENTLY ASKED QUESTIONS

Below are some of the frequently asked questions we've come across when talking to joiners about Part Q. As well as some questions about our 'PartQ Blueprint'.

Q I'm buying PAS24 products, does that mean I'm complying with PartQ?

A No. Just because you're buying PAS24 products does NOT mean you are complying with PartQ. To comply with PartQ you need to either test your own windows or use evidence that your windows and doors are manufactured following a PartQ tested scheme.

Q What is the cost to follow this Blueprint?

A Zero. There is no cost to follow our blueprint. We are giving this away to the industry for FREE. We'll supply you with all you need to self certify that your windows and doors are compliant by following the details in this document.

Q What's the catch?

A There isn't one! SDH, Accoya and ERA, truly believe our industry needs help in overcoming this cumbersome regulation. Making it easier and less costly for Joiners to produce compliant windows and doors, ensuring our industry thrives.

Q What if my windows or doors are a different configuration or larger in size than the windows or doors tested ?

A In the above instance, we would term this as 'outside scope'. When a window or door is 'outside scope' please get in touch with the developer or the building control office and receive written consent that they agree the windows or doors are fit for purpose. A footnote to this; is that not every size and configuration can be tested as it is financially unobtainable. Most companies that have a PAS 24 window and door, follow the sizes and configurations of the test that we have conducted. When the product sits 'outside scope' we advise the following statement to be put forward...

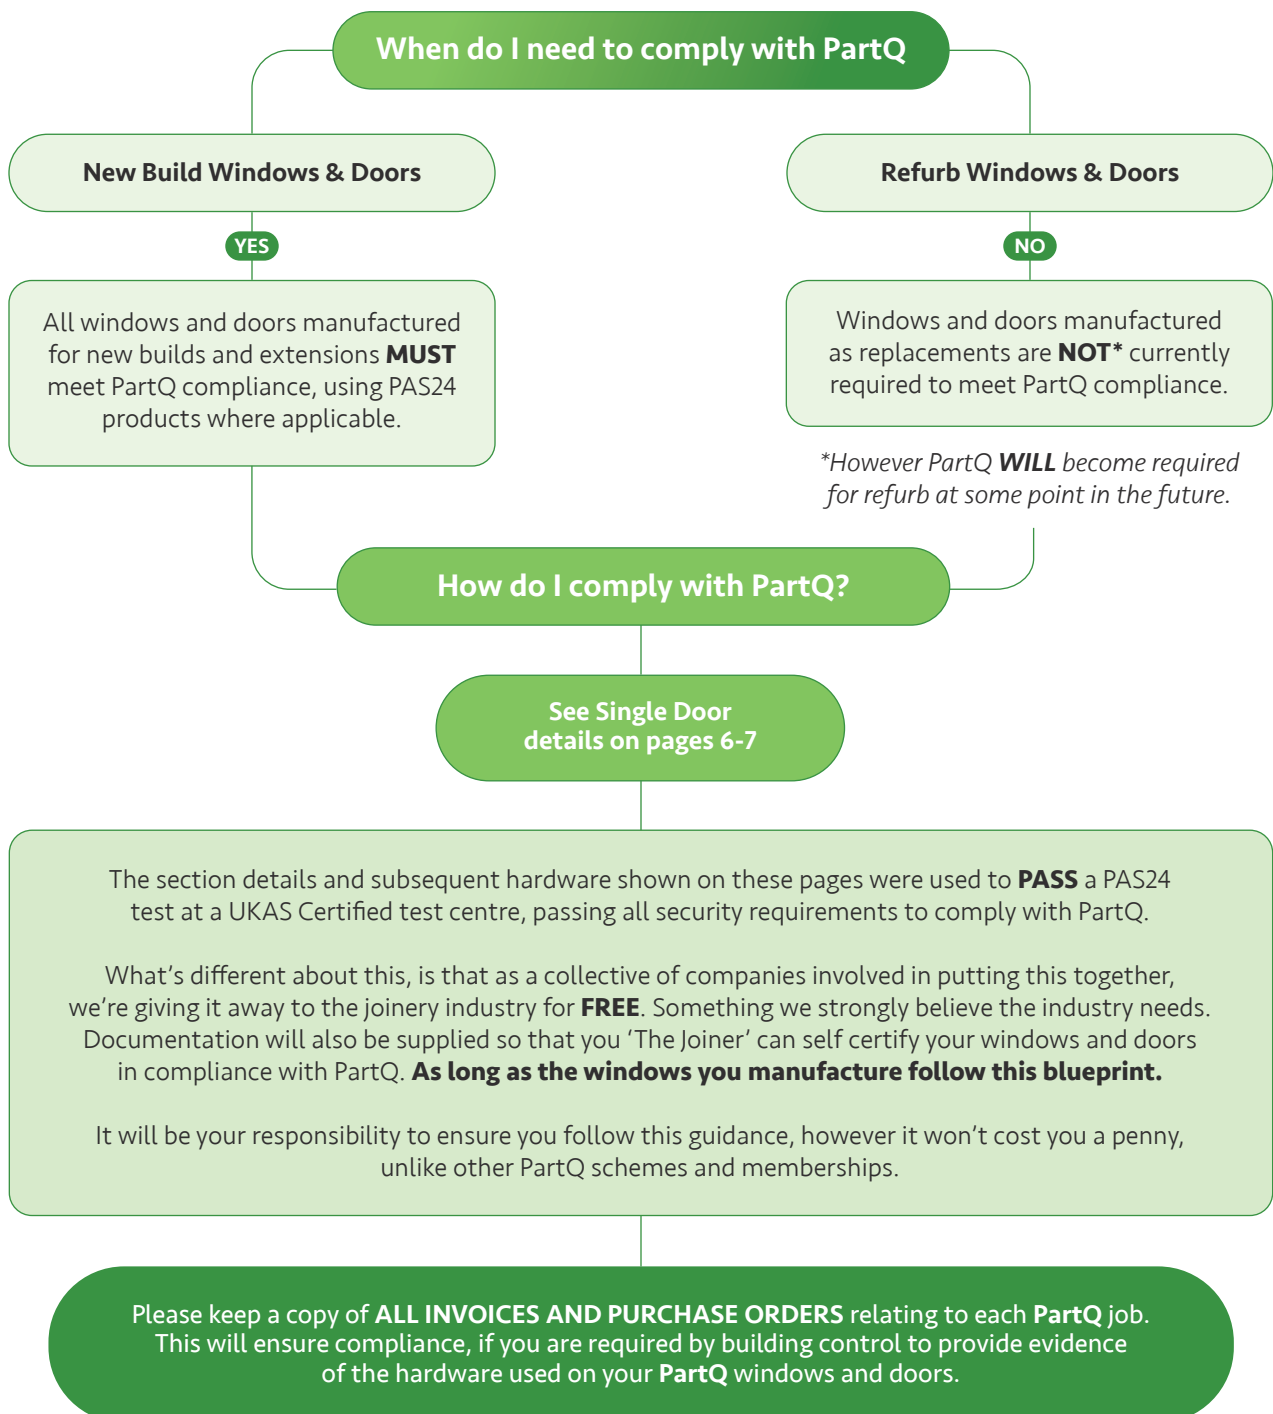

"Although this window or door is outside the scope of the windows and doors tested, we can safely assume the manner of construction and hardware used deems this window or door to be secure." This terminology and statement is what is usually raised if and when the question arises.

Q What if I'm asked to design a window or door differently?

A If you are asked by your client, the developer and/or building control to design a window or door differently, (one example could be for heritage reasons) this would be considered outside scope. In this instance, we would recommend that you advise your client and building control that you can still ensure the window or door will be made secure by using the same hardware stated in the test data supplied. However, if the design or section details are changed this would require the signing of documentation by the client, developer and/or building control stating they agree each window or door sits outside scope for aesthetic or heritage reasons. Putting the onus on them rather than you the Joiner. **(Please see 'Outside Scope Statement' document).**

How do I comply with PartQ?

Follow the process below to discover as and when you need to comply with **PartQ**... Including the steps you're required to take ensuring compliance when required.

SINGLE DOOR: Component List

MULTIPOINT LOCK

Part No.	Description
VIP45M	Viper Single Door Master Lock (45mm Backset)

KEEPS

TDBKBASE	Timber Door Keep Latch Base
TDBK56	TDBK Latch Strike (28mm)
TDBKHOOK	Timber Door Hook/Deadbolt Keep x 2

CYLINDER

CYKKD-3S-N-3545	3 Star Euro Double Cylinder
-----------------	-----------------------------

HINGES

ATOM-SQ or RE	SOX Atom 4 Inch Stainless Steel Hinges (Square or Radius) x 4
---------------	---

THRESHOLD

MXS15-56	Exitex Inward Opening MXS15/56 Door Threshold
----------	---

GLASS & GLAZING TAPE

-	4-16-4 Toughened Panes
SGT2X12	2 x 12mm Security Glazing Tape

SINGLE DOOR: Section Drawings

HEAD & CILL SECTION

The drawings on this page show the section details of the door that was security tested to PAS 24, adhering to Part Q guidelines. To ensure compliance you **MUST** use the sections and associated hardware.

Method of Jointing:

Mortice & Tenon

Test Details

Test No: 2505

Date of Issue: 19/03/25

Test Centre No: 4052
